This letter is in regards to an updated model listing for our VIN codes.  
Attached is a breakdown of our coding system.

Example: 13SAH202XX1AA1985

The first three characters will always be 13S. This is our world manufacturer identifier that was assigned to our business.

The 4th character is the types of trailers we produce. (A-Sunlite)

The 5th character is the body type of the trailer. (H-720GN)

The 6th & 7th characters are the length in feet. (20-20 feet)

The 8th character is the number of axles on the trailer. (2-2axles)

The 9th character is the check digit that will be determined by carrying out the mathematical computation when the number is assigned. (X)

The 10th character is the model year of the trailer. (X-1999)

The 11th character is the plant location which will always be 1 because we manufacture all the trailers at this one location. (1)

The 12th through 17th characters are sequential production numbers designated as follows.

The 12th character will be the same as the 4th character (type of trailer).

The 13th character will be the "set of ten thousand" (A=first ten thousand, B=second ten thousand, C=third ten thousand, Etc.)

The 14th through 17th characters are the sequential production numbers. When the sequential production numbers reach 9999 they will reset to 0001 and the "set of ten thousand" will then advance from A to B.

The example listed above refers to a 1999 model Sunlite 720GN 20' in length with 2 axles.

If you have any question to the information provided in this letter please feel free to contact me.

Thank You,

  
Vic Cook
